# GREEN-FUNCTION BREAKDOWN | REVISED FIGURE 2

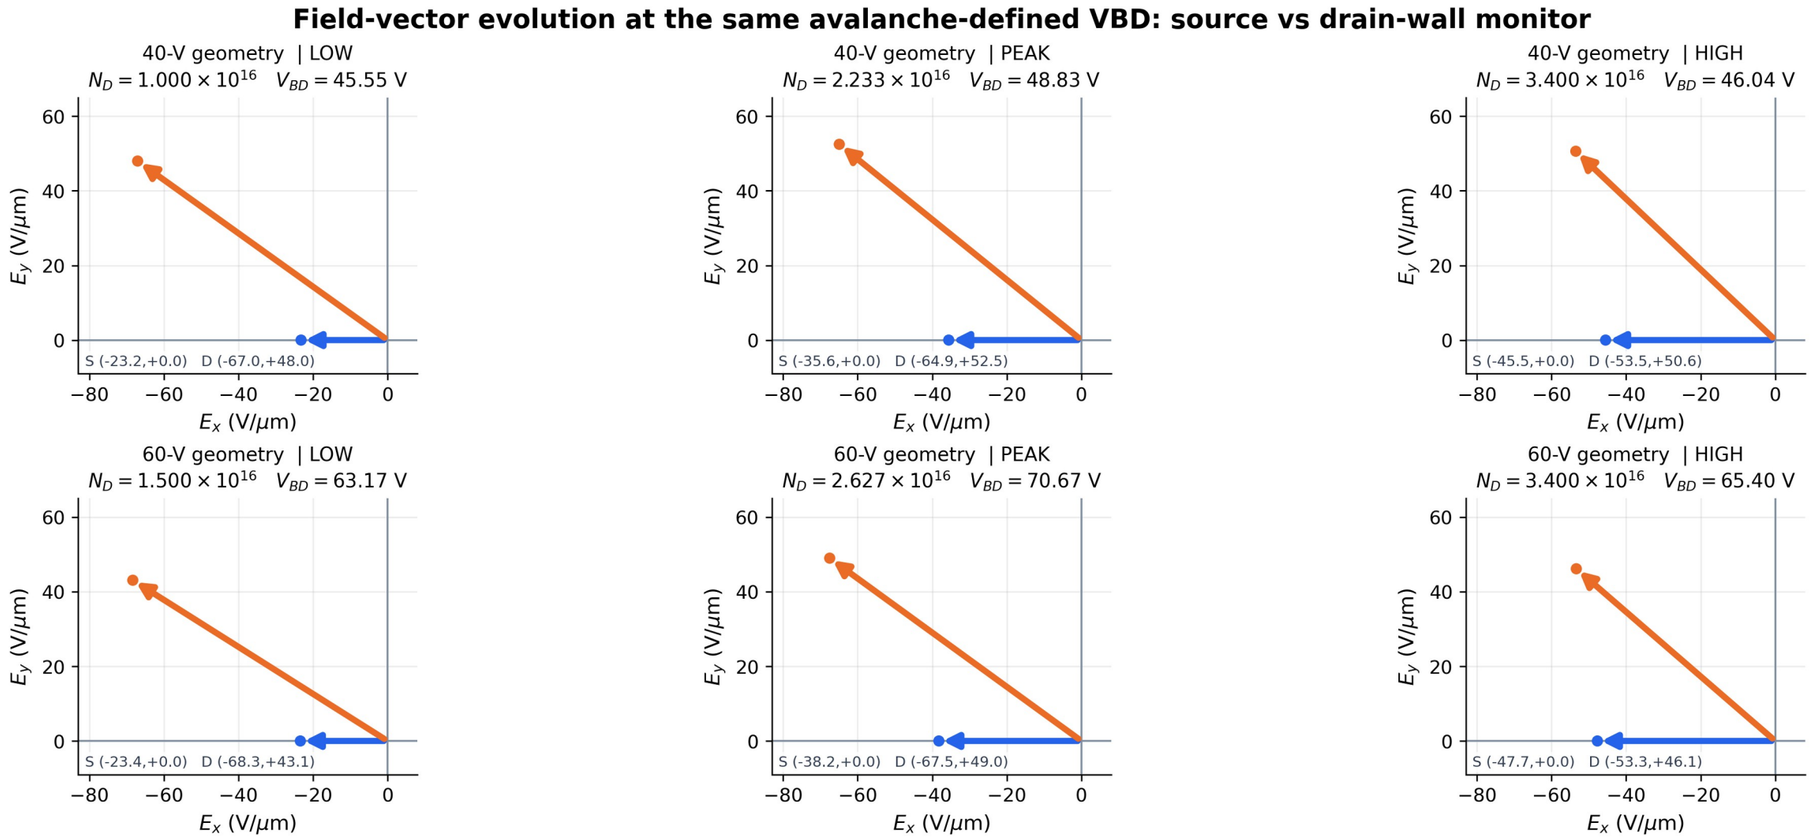

Source report geometry families · 300 K centerline avalanche · no curve fitting

## 1 VBD versus doping: gradual rise before the maximum

**Ws = 0.50 µm • 40-V geometry: 45.55 → 48.83 → 46.04 V • 60-V geometry: 63.17 → 70.67 → 65.40 V**

## 2 Actual Ex–Ey vectors at those avalanche voltages

Blue = source centerline (0,0); orange = drain-side wall monitor (L−0.10 µm, Ws). These are local vectors, not verified global avalanche hotspots.

Source: uploaded Green_Function_Breakdown_Report (8).pdf, Fig. 2 & Eqs. in §§4–6. The avalanche criterion differs from the earlier 2D peak-Ec study.
